

# Team Meeting 16/08/21

From the standup:

- ☐ @ Richard Li to review then contact client for Lo-Fi prototype feedback
- ☒ @ Walter Van to do Motivational Modelling
- ☒ @ Parit PHOWARASOONTORN to model database structure in UML  
Shang Zhe recommends using Umlet and VS Code extension
- ☒ @ Yujian Wang to get reviews from team and clients to prepare for Hi-fi | wireframe  
To meet individually for reviews with people. To decide on the time with them.  
Also open to discussion from comments
- ☒ @ Shang Zhe Lee to migrate stories into issues on GitHub to prepare product backlog
  - ☒ To establish source code repo for npm and environment

Shang Zhe to start turning user stories into issues to fill product backlog  
Richard mentions each user story relies on each other. Stories can have preconditions.  
Each user story is a feature, Shang Zhe says, could be developed independently on user flow.

Shang Zhe asks for export possibilities to save MIRO to export boards to migrate to DrawPile.  
Giant screen capture.

Discussions on MERN, we agreed to work in React with Functional Components. Also discussed the properties of Typescript to use in favour over Javascript.

Shang Zhe states giving a little workshop on the development process, running through testing and environment.  
Setting up a docker container to run? How to do the Git.

Using Expresses to host the server and decided to have one server for hosting

Shang Zhe recommends using Umlet :: they now have a VS Code extension.
