

Team PorkBelly
Meeting Minutes 6th October, 2021

Meeting time: 4:00pm

Attendance: Walter, Richard, Yujian, Shang Zhe

Initially, the team discussed the handover processes over a draft presentation for Sprint 2 review.

Richard asked about what's next for the next two weeks.

Yujian suggested the prospect of responsive design.

Walter showcased the prototyped mongoDB Ci pipeline. He marked issues with testing locally where the appropriate server-database connection string needs to be passed for the integration tests to function properly. He noted that integration tests could be done 'manually' for a proper testing result document to be created – so that a link can be sent to week 12 Checklist. Should have screenshots of the test results.

Yujian felt that his progress on OverallStyle was roadblocked by the open pull request for TagOverflow. Walter and Richard suggested that Yujian rebase the branch over his.

A display bug was found where scrolling down the card detail panel and calling edit, causes the scrolling to reset to the top.

Shang Zhe stated that it was a FluentUI bug. <https://github.com/microsoft/fluentui/issues/16653>.

Walter showed Shang Zhe his current set up for the mongodb CI. They concluded that the DB testing string should be passed around the tests through an environmental variable. Shang Zhe also suggested that having multiple supertest agents in each test may be best for sharing an authorised agent around. It may also benefit from having different data sets for each test. After an observation of the CI script, Shang Zhe also suggested that the script should run a hanging process that checks for the server spooling up to complete, ensuring synchronousness in the script.

Meeting ended at: 6:07pm
