

**Team PorkBelly**  
Team Minutes  
29th September, 2021

Meeting scheduled: 8:00pm

Attendees: Walter, Richard, Parit, Yujian

Walter asked about the new issue #121 on Github. Richard reported that JEST did not support import.meta in ES2020. He had not found a work around and hence placed an issue on the repository. He would like to forego writing the test for the time being.

Parit had reported an error with testing for dialog. The issue stems from a component <withResponsiveMode> in the <Dialog> component. Looking at the fluentui repository, the error was thrown on the constructor of the component, which was marked Deprecated.

Walter's checklist progress is in the middle of defining the testing plan.

Richard had communicated with the client regarding the optional features for Sprint 3. They had replied those features are good but not required, and that they advised the team to spend Sprint 3 on handover: sprint would focus on features, design, and handover. Cleaning up the code and polishing the application.

Yujian illustrated his Home component. He would like the buttons to be embedded inside the taglist so that the transparent gradient of the buttons would go above the scrollbar. Richard and Yujian together made changes to solve this issue.

Meeting ended at 8:40pm.
