

Team PorkBelly
Meeting Minutes
30/09/21

Meeting Scheduled: 8:00pm

Attendees: Walter, Richard, Yujian, Shang Zhe

Looked over the checklist.

Walter enquired on the styling progress. Richard had started styling the Tag, Tag Picker and Editor. Yujian had completed styling the home page, and is now struggling login view. Richard offers to help with styling the FluentUI elements.

Shang Zhe joined 8:15pm.

Parit's modal testing problem, regarding `<withResponsiveMode>` error was addressed. Shang Zhe suggested either enclosing the test in an Error Boundary to catch the error, or disregard testing. Shang Zhe had already styled the Tag component. Richard would like to cherry-pick that implementation for his task.

Richard reported that he could not test the image frame in JEST, due to its reliance on `import.meta`. This is required for the image worker to function. Shang Zhe suggested that the image worker could be disabled / mocked, or that jest would be deactivated using `(jest===null)` so that the worker can load in the testing environment. Since the test did not involve image processing, the image work should be removed.

Meeting ended 8:55pm
