Next steps.
After the client leaves.

We think about the next step: user stories and lofi layout – Wireframe. Functional Requirement Document.

User stories identified:
1. user logs in
2. user registers self
3. user searches cards
4. user adds cards
5. user deletes cards

Layout and WireFrame:
Any software, even Paint. Software with many design tools get in the way of making brief wireframes. (Fiddling with margins for example.) DrawPile for online collaborative work.
