Team PorkBelly
Meeting Minutes
10th September, 2021

Meeting started at 4:00pm
Attendees: Walter, Shang Zhe, Yujian, Richard

Richard was having trouble with his card detail component being unable to install JIMP.

Shang Zhe enquired Yujian for his progress on the home page. Yujian had created a functional view. A branch on the Github existed for team members to view. The view contained a list of cards obtained from GET /me.

Shang Zhe highlighted his lifecycle test UI to demonstrate the responsibilities of the Home Components. However, he mentioned that the Home page should accommodate for the layout shown in the prototypes. This could be done through using growing Stack.Item(s) and Stack. Dynamically changing this value during callback in HomeContext.

The issue of users accessing the /me page through login out and returning via history. Shang Zhe investigated the issue and found that the server was issuing cache-control for its GET /me – a default behaviour. This was resolved by setting cache-control to no-store in all requests from the backend.

Walter intended on creating integration testing for the endpoint. He noted that it is a Sprint 2 issue and hence may be pushed back to sprint 2. Shang Zhe also mentioned Visual Styling, a Sprint 1 issue as of the time of the meeting, should be pushed back to Sprint 2. This was done in acknowledgement of the time spent on the Sprint. He was determined to complete Sprint 1 by the end of the day.

Pep joined at 4:37pm.

In light of this, Walter asked when the client should be contacted for a review. He outlined a tentative plan for the next week. Once the sprint was completed, the application would need to be briefly tested for functionality – manually using the application and finding for breaks. Shang Zhe would like to establish a deployment on Heroku with our Atlas Cluster connection, in preparation for the Sprint Review with the client. Richard would contact the client for a time for review and the team should consider questions to confirm their work and findings.

Shang Zhe opted to remain throughout the evening to help others in their work.

Meeting ended 5:00pm.
